## Matter Notes

OB: We will determine what matter is, what are the phases of matter, and describe various physical properties of matter. We'll also cover lots of vocabulary that you MUST MASTER ASAP

1. Matter
2. All matter is in one of these 4 "states" or phases:
A. $\qquad$ B. $\qquad$ C. $\qquad$ D. $\qquad$
3. The word aqueous means:
4. Matter can be PURE or MIXED. Pure matter includes the $\qquad$ (from the $\qquad$ table) and the millions of $\qquad$
5. Mixtures are $\qquad$ of pure $\qquad$ .
6. What is a physical property of matter?

Qualities that can be... $\qquad$ and are $\qquad$
7. Some examples of physical properties include...
8. Physical Changes are also called $\qquad$ changes.
9. When matter changes phases (6 different ways, know all of these) we give them these specific names.

Solid $\rightarrow$ liquid is called $\qquad$ Liquid $\rightarrow$ solid is called $\qquad$

Gas $\rightarrow$ liquid is called $\qquad$ Liquid $\rightarrow$ gas is called $\qquad$

Solid $\rightarrow$ gas is called $\qquad$ Gas $\rightarrow$ solid is called $\qquad$
10. Chemical \& Physical Changes in matter (fill in the blanks)

11. Physical changes are just $\qquad$ .

Chemical changes are $\qquad$ , which make new stuff.
12. What are mixtures? Mixtures are... $\qquad$
The properties of matter in a mixture... $\qquad$ . THEY ARE STILL PRESENT.
$\qquad$ ARE FORMED WHEN MAKING A MIXTURE.
14. Mixtures are either $\qquad$ or are together.
15. Mixtures that are mixed the SAME THROUGHOUT are called $\qquad$
16. Mixtures that are mixed DIFFERENTLY THROUGHOUT are called $\qquad$
Examples of mixtures
17. $\qquad$ and $\qquad$ are $\qquad$
18. $\qquad$ and $\qquad$ are $\qquad$
19. Salt water is $\qquad$ - it's the same throughout.
20. Chocolate milk is $\qquad$ , because the chocolate will settle to the bottom.
21. Oil and vinegar are $\qquad$ , they will not mix.
22. Mixtures can come in ALL PHASES. Examples of mixtures- Fill in this chart

| Solution phase | Contains this | Mixed into this | examples |
| :---: | :---: | :---: | :---: |
|  | Carbon | Iron |  |
|  | Zinc | Copper |  |
|  | Ethanol | Fruit juice |  |
|  | Ocetic acid | Water |  |
|  | Table salt | Nitrogen |  |
|  | Sugar + Food color | Water |  |

23. Draw this chart (it's the most important diagram of the whole course, please take this seriously.
24. State the Law of Conservation of Matter:
25. The sodium + chlorine are called $\qquad$
26. Sodium Chloride is the $\qquad$
27. The mass of the $\qquad$ EQUALS the mass of the $\qquad$
because all chemical reactions follows the... $\qquad$
28. If you completely react 46 grams of sodium with 70 grams of chlorine gas, how many grams of sodium chloride form?
$\qquad$
29. If you completely react 8 g hydrogen with 64 g of oxygen, how many grams of water will form?
$\qquad$
30. If 4 g hydrogen reacts with sufficient oxygen and forms 36 grams water, how many grams of oxygen was used up in this reaction?
31. $\qquad$ $\mathrm{g} \mathrm{H}_{2}+28 \mathrm{~g} \mathrm{~N}_{2} \rightarrow 34 \mathrm{~g} \mathrm{NH}_{3}$
32. $223 \mathrm{~g} \mathrm{Fe}+96$ grams $\mathrm{O}_{2} \rightarrow \quad \mathrm{~g} \mathrm{Fe}_{2} \mathrm{O}_{3}$ (rust)
33. Rust has this formula: $\mathrm{Fe}_{2} \mathrm{O}_{3}$

It has $\qquad$ atoms of iron bonded to $\qquad$ atoms of oxygen for a total of $\qquad$ atoms in this compound.
34. Carbon dioxide is $\mathrm{CO}_{2}$

It has $\qquad$ atoms of carbon bonded to $\qquad$ atoms of oxygen, for a total of $\qquad$ atoms in this compound.
35. How many atoms are in each compounds?
$\mathrm{H}_{2} \mathrm{O}$ $\qquad$ NaCl $\qquad$

## $\mathrm{CO}_{2}$

$\qquad$ $\mathrm{H}_{3} \mathrm{PO}_{4}$ $\qquad$
$\mathrm{H}_{2} \mathrm{SO}_{4}$ $\qquad$ $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ $\qquad$
36. These are harder, how many atoms of each kind, how many all together in each compound?
$\mathrm{SnO}_{4}$
$\mathrm{H}_{3} \mathrm{PO}_{4}$
$\mathrm{KHCO}_{3}$
$\mathrm{Li}_{2} \mathrm{C}_{2} \mathrm{O}_{4}$
$\mathrm{Ca}(\mathrm{OH})_{2}$
$\mathrm{Al}(\mathrm{OH})_{3}$
$\mathrm{Al}_{2}\left(\mathrm{Cr}_{2} \mathrm{O}_{7}\right)_{3}$
$\left(\mathrm{NH}_{4}\right)_{2} \mathrm{SO}_{3}$
37. Mixtures are just physical blends of pure substances, they could be
$\qquad$ $+$ $\qquad$ , or $\qquad$ $+$ $\qquad$ , or
$\qquad$ $+$ $\qquad$
38. Compounds are chemically bonded atoms, which make $\qquad$ .
39. Mixtures retain the properties of the parts, $\qquad$ .

40. The "principle" that allows us to do this is that the sand is much bigger than the water particles, and sand gets stuck in the filter paper. We...

41. If you have an aqueous solution of ethanol and water and need to separate them, you can't filter them, both particles are too small to be caught in a filter paper. You can take advantage of the fact that they have a different boiling point (about $100^{\circ} \mathrm{C}$ for water, about $81^{\circ} \mathrm{C}$ for the alcohol).
42. Label the distillation apparatus

43. Here, the iron is separated from sulfur, by
of the magnetic attraction of iron to the magnet, which sulfur does not have.

44. Something that we will do is called $\qquad$ .
It will allow the separate of colors by taking advantage of both solubility of ink in water, and density of particles.
45. You could also separate mixtures by taking advantage of differences in...
46. A chemical reaction is when 2 or more substances are combined in a chemical reaction, and we get... that form, and these have $\qquad$ properties than the reactants had.
47. How will we recognize if a chemical reaction has probably happened? We will use the acronym...
48. If these things "happen", a chemical reaction probably happened.

T-

O-

P-

I-

C-

B-
49. A $\qquad$ shows the idea of chemical substances in a cartoon sort of way
50. Particle diagrams for a GAS, a LIQUID, and SOLID

|  | phase | Shape | volume |
| :---: | :---: | :---: | :---: |
| 51 | Gases |  |  |
| 52 | Liquids |  |  |
| 53 | solids |  |  |

54. Particles are small shapes. A single shape alone indicates an $\qquad$
55. When 2 or more shapes touch, this symbolizes a $\qquad$ .
56. If the 2 shapes that touch are IDENTICAL, that indicates a $\qquad$
$\qquad$
57. Draw

| Atoms | Molecules | Diatomic elements |
| :--- | :---: | :---: | :---: |

59. A physical change is another way to say
A. a compound forms
B. a phase change happens
C. Matter is turned into other matter
D. You change the shape by squishing or pushing matter
60. Match these up

GAS
Definite shape definite volume

LIQUID
Indefinite shape, indefinite volume
Indefinite shape, definite volume
SOLID
61. Define Heterogeneous:
62. Which CAN be decomposed by a chemical change? A. Co
B. CO
C. Hg
D. Fe
63. How can we separate a mixture of salty water?
A. A chemical reaction
B. Filter paper
C. With a magnet
D. With a distillation apparatus
64. Convert the melting point of copper into centigrade degrees. Use a formula.
65. If 502 grams of iron completely combines with 216 grams of oxygen to form rust, how many grams of rust form?
66. When 2 elements chemically combine into a product, the product...
A. has the same properties as the reactants
B. has a blend of properties of the reactants
C. has new, unique properties, unlike the reactants
D. may or may not be similar, it depends on the elements combining
67. Count the number of atoms in these formulas
A. aluminum permanganate $\mathrm{Al}\left(\mathrm{MnO}_{4}\right)_{3}$
B. ammonium carbonate $\left(\mathrm{NH}_{4}\right)_{2} \mathrm{CO}_{3}$
C. nickel (III) acetate $\mathrm{Ni}\left(\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}_{2}\right)_{3}$
68. Name the phase changes

Solid to Gas $\qquad$ Liquid to Gas $\qquad$ Solid to Liquid $\qquad$

Gas to Solid $\qquad$ Liquid to Solid $\qquad$ Gas to Liquid $\qquad$
69. State standard temperature in both Kelvin and in Centigrade. $\qquad$
70. Calculate (with a formula) the volume of 375 grams of sodium metal.
$\mathrm{C}_{7} \mathrm{H}_{16(\mathrm{~L})}+11 \mathrm{O}_{2(\mathrm{G})} \rightarrow 7 \mathrm{CO}_{2(\mathrm{G})}+8 \mathrm{H}_{2} \mathrm{O}_{(\mathrm{G})} \quad$ This is a balanced equation for the combustion of heptane.
71. Which of the four are reactants? $\qquad$ and $\qquad$
72. Which are the products? $\qquad$ and $\qquad$
73. How many atoms in heptane? $\qquad$
74. Name some ways to separate mixtures, (use the "one liner" that tells us how to do it).

75. Which box or boxed contain

A diatomic element? $\qquad$ A mixture? $\qquad$
$\qquad$ A compound? $\qquad$
