

To help you to study for the Celebration on \_\_\_\_\_.

I would like you to write a letter to the student who's name appears on the end of this note. This would be a friendly and encouraging letter that would remind them exactly what to study for our dual Celebration of Knowledge about Matter and Atomic Theory. You should clearly share with your new pen pal vocabulary words, formulas, names, and numbers. Maybe include an example or two, so that they can really prepare for Friday.

They might take your advice, and they'll do great. (that's good) Someone else will write you a letter. You can take their advice, or you might read it and find only one thing you didn't know or remember. So what? Since you wrote someone a great letter to offer help, you'll remember all of your own good advice. The more good advice you give, the more you'll really be giving to yourself. Anything else you get from your chemical pen pal is gravy, and gravy is good! What a nice little turn of words that is: Gravy is Good!

If your handwriting is wild, consider typing. Only use first names, these handouts are random, your pen pal might be someone you know, or don't know, it doesn't matter. You never have to meet them and there is no grade attached to this (except of course your celebration grade).

The celebration is mostly multiple choice, plus some math. Don't be late, bring a calculator and your reference tables with you. You'll have to be ready, make decisions to dump a particular question if it bogs you down, and remember to come back to it later, to not leave blanks, and to be prepared. Making index cards to learn vocabulary, or those danged scientists and their models in order, is important. Knowing stuff, memorizing that, will give you more time to think on other questions. This will not be too hard, if you study.

There will be NO RETAKES on this celebration. If you truly crash, you'll have to study even harder for the next one. This counts, you have work to do.

Please sign your letters neatly with your name. This is due \_\_\_\_\_

Address your letter this way:

Dear \_\_\_\_\_ in period \_\_\_\_\_,

_____ in period _____
-----------------------
