

Naming Compounds HW #1 name: \_\_\_\_\_

Fill in all of these boxes properly. Get out your periodic table to do this.

2 examples provided, one METAL that makes a + cation, and one NONMETAL that forms a — anion.

atom	# protons (atomic number)	ground state $e^-$ configuration	ion $e^-$ configuration (noble gas it's isoelectric to?)	#electrons in ion	ionic symbol
Li	3	2-1	2 (He)	2	$Li^{+1}$
F	9	2-7	2-8 (Ne)	10	$F^{-1}$
Be					
Mg					
K					
Cl					
N					
O					
Na					
P					
S					
Mg					
Br	35	2-8-18-7	2-8-18-8 (Kr)	36	$Br^{-1}$

## Compounds HW #2 Naming simple ionic compounds

name: \_\_\_\_\_

1st name rule: name the metal cation, it is always the same name as the metal atom

2nd name rule: name the non-metal anion, but change the ending to be -ide.

Examples: Oxygen becomes oxide, sulfur becomes sulfide, bromine becomes bromide (etc.).

No matter what the ratio of cations to anions is, we use the single metal name and the single anion name.

For each pair of metals and non metals, write the ions symbols with charges, write the neutral formula for the ionic compound that they form, then, name the compound.

Metal	Non-metal	Cation that forms	Anion that forms	Compound that forms	Compound name
Ba	S	$\text{Ba}^{+2}$	$\text{S}^{-2}$	$\text{BaS}$	Barium sulfide
Rb	N	$\text{Rb}^{+1}$	$\text{N}^{-3}$	$\text{Rb}_3\text{N}$	Rubidium nitride
Li	O				
Al	F				
Sr	S				Strontium sulfide
Na	Br				
Ca	O				
Cs	P				Cesium phosphide
Be	O				
Mg	N	$\text{Mg}^{+2}$	$\text{N}^{-3}$		
K	O				
Na	P				Sodium phosphide

## Compound HW #3 Naming Transitional Metal compounds

name: \_\_\_\_\_

Write out the 10 Latin prefixes to use to count atoms from one to ten					

	Write names for these		Write formulas for these
$\text{N}_2\text{O}_5$		Hydrogen mono iodide	
$\text{SO}_3$		silicon difluoride	
$\text{PCl}_3$		dinitrogen monoxide	
$\text{NF}_4$		fluorine monobromide	
$\text{PBr}_3$		arsenic trichloride	
$\text{CCl}_4$		sulfur dioxide	
$\text{H}_2\text{S}$		phosphorous pentabromide	
$\text{I}_4\text{F}_7$		diarsenic decabromide	
$\text{SeCl}_4$		Tri-tellurium dichloride	

Using the “T” chart and the selected oxidation numbers, show all possible compounds (formulas and names) for nitrogen and oxygen.

**N** | **O**

Using the “T” chart and the selected oxidation numbers, show all possible compounds (formulas and names) for phosphorous and fluorine.

**As** | **Cl**

## Naming Compounds Homework #5

name: \_\_\_\_\_

Fill in all blanks correction, the first 2 pairs are examples for you. 2 pages...

	cations	anions	formulas
